

A photograph of two students walking away from the camera on a paved path. The student on the left is a young man with short brown hair, wearing a light blue polo shirt and white shorts, carrying a basketball in his right hand and a large black duffel bag over his left shoulder. The student on the right is a young woman with long dark hair, wearing a red t-shirt and white shorts, carrying a large grey backpack and holding a white piece of paper. The path is lined with green trees and a flowering bush on the right. In the background, a large, light-colored building is visible through the foliage.

Changes in the Number of Division I Graduate Transfers

June 2018, Revised September 2018

Summary

- In 2017, the number of graduate transfers in men's sports is four times what it was in 2011, while the women's numbers have nearly tripled.
- However, the number of graduate transfers is still low relative to the total number of participants in Division I sports. There were only 534 graduate transfers identified in the 2017 APR data out of nearly 110,000 Division I student-athletes (0.5 percent).
- Graduate transfers are most prevalent in men's basketball (2.1 percent of current players are graduate transfers), football, women's basketball, and men's and women's track and field.

Methods

- “Graduate transfers” are defined as student-athletes who previously earned a bachelor’s degree and then enrolled during the 2016-17 academic year as a graduate student at a different Division I college.
- Only Division I student-athletes in an Academic Progress Rate cohort were included in the analyses (includes most scholarship and recruited student-athletes).
- Men’s and women’s cross country were removed from analyses to avoid double-counting track and field and cross country participants.

Changes in the Number of Division I Graduate Transfers (Men's Sports, 2011-17)

Changes in the Number of Division I Graduate Transfers (Men's Sports, 2011-17)

	2011	2012	2013	2014	2015	2016	2017
