

Results of Division I SAAC Athletic Time Commitments Survey

Prepared for Division I SAAC
December 2015

Methods

- Athletic time commitments survey was designed by Division I SAAC with assistance from NCAA research staff.
- Short survey administered online through Qualtrics survey software. Designed to be taken via phone, tablet, or computer.
- A snowball sampling technique was used. National SAAC representatives forwarded the link through conference and campus SAACs to student-athletes. ADs, SWAs, FARs, and coaches were made aware of the survey and asked to encourage student-athletes to participate.
- Survey open from November 2-24, 2015.

Response Rate

- Responses were received from 28,004 Division I student-athletes.
- Women responded to the survey at higher rates (25%) than men (12%).
- Freshmen responded at higher rates than other student-athletes, but all classes were adequately represented.
- Response rates varied by sport and conference. Football had one of the lower response rates (7%), but that still equates to over 2,000 survey participants in the sport.

Results

Summary of Findings

Countable Athletically Related Activities (CARA) Limits

- There are a few sports (e.g., men's golf) where a majority of student-athletes support increasing the daily or weekly CARA cap.
- Just under half of football and men's basketball players support daily CARA caps being lifted, but only 13% support moving above 20 hours/week of CARA.
- Most women in Division I do not support increasing the 20 hour/week CARA limit.
- While competition days are currently counted as 3 hours across sport, student-athletes in each sport reported spending 4-9 hours on athletics during a typical day of competition.

Summary of Findings

Time Away from Athletics

In-season

- Most SAs support requiring at least one day away from practice and competition per week. More than 40% of M/W basketball and football players would prefer two off-days per week.
- There is a strong preference by SAs in most sports that an off-day be free from team travel.

Post-season

- A majority of SAs support a mandatory break from their sport (prohibiting organized team activities) when the competition season ends.
- In most sports, a two-week break is preferred.

Summary of Findings

Limits on Competition

- There is varied support by sport for eliminating non-conference mid-week games. About 40% of football players and 30% of M/W basketball players support eliminating them. Highest support was in women's volleyball (57%).

Time Demands Discussions During Recruitment

- Most recruited student-athletes feel that they were honestly informed about time demands by their coach during the recruiting process.
- FBS football (43%) had the highest % of participants who said time demands are more than what they were told during the recruiting process.
- Many SAs support requiring coaches to discuss time demands during recruiting and requiring incoming SAs to attend an orientation or training session on managing time demands.
